OV12830 12.7-megapixel product brief

Full Resolution 12.7-Megapixel High-Speed Photography and 1080p/60 HD Video for Smartphones and Tablets

OmniVision's OV12830 is a 12.7-megapixel CameraChip™ sensor designed to meet the high quality image and video recording standards of the next generation high-end smartphones and tablets. In addition to capturing 1080p/60 high-definition (HD) video, the sensor is capable of capturing full resolution 12.7-megapixel images at 24 frames per second (fps), enabling high-speed photography.

The OV12830 utilizes 1.1-micron OmniBSI-2™ pixel architecture to enable an active array of 4224 x 3000 pixels (12.7-megapixel) operating at 24 fps, which minimizes shutter lag from shot-to-shot. An on-chip RAW scalar allows the sensor to capture 10-megapixel resolution video in a 16:9 aspect ratio (4224 x 2376 pixels) at 30 fps, while maintaining full field of view. Furthermore, the 1/3.2-inch OV12830 is capable of

capturing full 1080p HD video at 60 fps with additional pixels for EIS. The OV12830 provides alternate row output from full-resolution at two different exposures, enabling high-dynamic range (HDR) still or video recording.

The sensor comes in die format with industry standard 4-lane MIPI interface connectivity. The sensor offers programmable controls for frame rate, mirror and flip, cropping, windowing and scaling, as well as support for horizontal and vertical sub-sampling. All required image quality controls, including defective pixel correction, lens shading correction and black level calibration are programmable through the SCCB interface.
