OV2643 2MP product brief

High-Performance 2-Megapixel SOC Camera for the High-Volume, Feature Rich Phone Market

available in
a lead-free
package

Designed to address the increasing demand for 2-megapixel resolution cameras in mainstream feature phones, the OV2643 brings high-definition (HD) video and excellent low-light sensitivity to this high-volume market. The OV2643 targets high-performance applications in a 1/4-inch optical format that fits the critical 6.5 x 6.5 mm camera module size. The OV2643 implements OmniVision's advanced 2.2-micron OmniPixel3-HS™ architecture to achieve a sensitivity of 1250 mV/lux-sec, enabling excellent image quality under the most challenging lighting conditions.

The OV2643 is a system on a chip (SOC) CMOS image sensor with advanced image signal processing that allows it to offer the quality and functionality of most high-performance DSC cameras, including support for 720p HD video recording at 30 frames per second, excellent sensitivity and high quality image capture while meeting the cost, size and performance requirements of the feature phone market.

The OV2643 offers automatic image control functions, which include automatic exposure control, automatic white balance and automatic black level calibration. It also features all standard image quality controls such as color saturation, hue, gamma, sharpness (edge enhancement), lens correction, defective pixel canceling and noise canceling and support for black sun cancelation.

The OV2643 comes with a standard serial SCCB interface and digital video port (DVP) parallel output interface, offering support for UXGA, SVGA and 720p with programmable controls for frame rate as well as video operations.
