# OV5642 5-megapixel product brief

## The World's First 1/4-inch 5-Megapixel SoC Image Sensor with OmniBSI™ Technology

available in  
a lead-free  
package

The OV5642 is the world's first 1/4-inch, 5-megapixel SoC sensor featuring OmniVision's most advanced 1.4 micron OmniBSI™ backside illumination architecture and TrueFocus™ ISP. It provides the full functionality of a complete camera on a single chip, including anti-shake technology, auto focus control, MIPI and high definition (HD) support (720p and 1080p). The OV5642 delivers best-in-class low light sensitivity of 680 mV/(lux-sec) to enable high quality streaming video and photography available for camera phone applications.

The low-voltage OV5642 provides full-frame, sub-sampled, windowed or scaled 8-bit/10-bit images in various formats over a serial camera control bus (SCCB) interface or high speed MIPI interface. It operates at up to 15 frames per second (fps) in full resolution with full user control over image quality, format and image data output transfer. An integrated JPEG compression engine simplifies data transfer for bandwidth limited interfaces.

The OV5642 features an embedded microcontroller to support an internal auto focus engine, a programmable general purpose I/O for external auto focus control, and an internal anti-shake engine for image stabilization. It uses proprietary sensor technology to improve image quality by reducing or eliminating common lighting and/or electrical sources of image contamination to produce a clean, fully stable, color image. All required image processing functions, including exposure control, white balance, defective pixel canceling and noise cancelling are programmable through the SCCB interface, MIPI interface or the integrated microcontroller.

The OV5642 offers bridging and daisy chain support, which allows secondary cameras to share the use of its TrueFocus ISP via the DVP, while providing continued output through the MIPI interface.
